EASY

1. BinaryGap

Find longest sequence of zeros in binary representation of an integer.

score: 100 of 100

Task description

A *binary gap* within a positive integer N is any maximal sequence of consecutive zeros that is surrounded by ones at both ends in the binary representation of N.

For example, number 9 has binary representation `1001` and contains a binary gap of length 2. The number 529 has binary representation `1000010001` and contains two binary gaps: one of length 4 and one of length 3. The number 20 has binary representation `10100` and contains one binary gap of length 1. The number 15 has binary representation `1111` and has no binary gaps.

Write a function:

```
class Solution { public int solution(int N); }
```

that, given a positive integer N, returns the length of its longest binary gap. The function should return 0 if N doesn't contain a binary gap.

For example, given N = 1041 the function should return 5, because N has binary representation `10000010001` and so its longest binary gap is of length 5.

Assume that:

- N is an integer within the range [1..2,147,483,647].

Complexity:

- expected worst-case time complexity is O(log(N));
- expected worst-case space complexity is O(1).

```
1  // you can also use imports, for example:
2  // import java.util.*;
3
4  // you can write to stdout for debugging purposes, e.g
5  // System.out.println("this is a debug message");
6
7  class Solution {
8      public int solution(int N) {
9
10         int n = N;
11         int div = n/2;
12         int mod = n%2;
13         int count = 0;
14         boolean betweenOnes = false;
15
16         if(mod == 1) {
17             betweenOnes = true;
18         }
19         else if(div == 1) {
20             betweenOnes = true;
21             count++;
22         }
23
24         n = div;
25         //String backwardBinary = "" + mod;
26         int max = count;
27
28         while (n >= 1) {
```

```
            div = n / 2;
            mod = n % 2;

            if(betweenOnes) {
                if(mod == 0) {
                    count++;
                }
                else {
                    if(max < count) {
                        max = count;
                    }
                    count = 0;
                }
            }
            else {
                if(mod == 1) {
                    betweenOnes = true;
                    count = 0;
                }
            }

            n = div;
            //backwardBinary += mod;
        }

        return max;
    }
}
```

Analysis summary

The solution obtained perfect score.
